Professionals In Focus
(The Sequel. The Remarkable New Findings. Answering The Critics.)

Neal Robert Smookler

“I”t feels quite freeing within seconds; an immediate and tangible change, say Neal Smookler. What Smookler is describing is a fascinating method that resets and refreshes the brain back to its youth. It seems as if you are growing younger; that was dumbfounding back then, still is today.”

“Inside your head is a physical triggering mechanism that enables the brain to reboot itself as you’d reboot your home computer. I want to be very clear; it’s not there by accident. You’re hard wired by Mother Nature that way. I was trained twenty years ago to know where the mechanism is located, and exactly how to activate it.”

There is an adulation you hear in Smookler’s voice for the profession he so adores — Alphabiotics, that onomatopoetically constructed word that reflects the actual process.

“‘I’m more excited today — as the message is now pregnant with possibility. It’s a message that I adore with all my heart and being, as it’s such a blessing. It demonstrates not only a Virgil Chrane’s brilliance and insight, but God’s loving kindness.”

If words like adoration and love seem a bit strange in discussing one’s profession, we need only take a few steps back to understand.

Smookler has spent the better part of the last two decades helping Dr. Virgil Chrane bring forth a remarkable new profession. Smookler’s work is cutting edge and old-fashioned. Profound, yet essentially simple. Complete and still evolving. This is the dichotomy Alphabiotics presents upon even the most casual of observation.

Every so often a person brings forth new information that completely transforms all those who hear it. Alphabiotics is not widely known by virtue of its radical simplicity. As long as the world adores complexity and revels in figuring out the secrets of the universe, this message will be dismissed as pedestrian by many and only heard by a few.

“It’s also incredibly easy to do — as there are no rigid protocols nor special rules to follow. That’s a refreshing new wrinkle for most”, quips Smookler.

“I once overheard an acquaintance state that the entire profession is nothing more than another ‘California fad’. To this very day that observation befuddles me. I see that more and more people are ‘waking up’. Thirty years ago the number one bestsellers in bookstores were cookbooks. Today, it’s books about significance and meaning. There’s an awareness surfacing today within so many. A genuine shift is occurring.”

“When the cover story of the May 7, 2001 Newsweek is ‘God And The Brain. How We’re Wired For Spirituality’ — we can be relatively certain the phenomenon isn’t just another burgeoning fad.”

“This is a message that comes out of a mystery. But there’s no need to flower up the mystery — it’s a mystery that works. So I’ll state the core message to those who will hear it. Alphabiotics is a simple way to address any limitation. The Alphabiotic method triggers a fundamental shift which results in an major and massive release of unconscious cumulative shock — resolving vastly complex challenges with stunning simplicity.”

A huge grin spreads ear to ear as Smookler recalls a symposium he attended over a decade ago. “Throughout the weekend the instructor kept referencing this brain ‘refresh’. As that was not the focus of the seminar, his ongoing detour into that concept was beginning to wear thin. Before going home he invited anyone who wanted the experience, the opportunity to receive just that.”

“I lay down while nervously awaiting my turn, all the while trying not to knock over the bowls of hard candy and pitchers of ice water. (We were in a hotel conference room). It was kind of comical. Then, without so much as an explanation, the instructor performed the ‘refresh’. No warning. No preparation. No primer. It was very brief, so brief in fact that I wasn’t sure what to make of it.”

“I got up and I was, uh ... humming; vibrationally humming. I was literally resonating at a different frequency — what I can only describe as an insulated cocoon of warmth, openness and peace. It was as if the heaviness of my life lifted. Do you know what I mean? I seemed to shift out of ‘brown out’, no longer waiting for the proverbial second shoe to drop. I seemed to go from a state of absolute chaos to one of order. I actually felt as if I was growing younger — that was cool.”

“I felt like my brain, my entire body had been somehow re-set, providing me with a clean slate. Boy, it was like nothing I had ever known. It was a lovely experience, but what was most surprising was I had no idea I had been in that limiting state — as I had no other perspective of reference. It really opened my life, like nothing I had ever known.”

“This is different. This is different. That’s all I could think. I couldn’t wrap my educated mind around the depth of what had just transpired.”

“It’s peerless. No-one else was doing this type of work — that was such a revelation.” (A statement that, in the years ahead would become painfully apparent for me personally).

In December of 1971 Dr. Chrane made a profound discovery. With a simple hands-on process he was able to restore whole-brain function. “His discovery has to rank amongst the most important of this century.
